Meeting minutes – 12/8/2020

Jerrayl – Login system, users have their own accounts, passwords, their stuff is all on our system which is a security problem

- Decouple backend and front end

Winnie - Heroku + MongoDB for database

Handle DB with Django

Mehmet – Add watermarks on the media so they won't be easily copied

Winnie – Password for website access (Ajay - option for public or not public)

- No need for watermarks

Juwey – Spotlight/most important thing highlighted instead of mashing them altogether

Jerrayl – Use widgets – put widgets on the page and arrange them around

- As an idea, not sure how difficult it will be, but can try
- Collage vibe might be good

Current flow

- Go to website
- Login
- Website retrieve any existing things they have
- They can make a portfolio or edit a portfolio
- The website has a link for other people to see the client's portfolio

Questions for client

- Login system? Or give to google because of security issues
- Confirm our technologies with the client
- Confirm use cases with client
  o What are their requirements
- Propose:
  o Heroku + MongoDB with Django
- How much information to put on the website – All or just a bit
- Who Is the target audience?
  o What are they using it for?
- What they think about a widget kind of thing
- What kind of media will be uploaded on the ePortfolio

To do

- UX design
- Decide API points – what we need
